CS 101 – Introduction to Computing:

This course introduces the concept of computing to students with no prior computer experience. The main ideas of computing are explored and students learn the most essential information about computers and technology in today's digital world and the latest computing trends and skills with live code exercises. Students will explore key ideas of coding at an introductory level. Topics include computer architecture, digital media, network, web, big data, computer security, and basic computer programming. Three credits.

**SW 305 – Mobile Application Development:**

This project-oriented course examines the fundamental aspects of mobile computing, application architecture, and mobile application design and development. Students will learn application development on the Android platform. Students will complete a hands-on project building a prototype mobile application. Topics include user interface design and building, input and data handling, and network techniques and GPS and motion sensing. Students are expected to work on a project that produces a professional-quality mobile application. Projects will be deployed in real-world applications. Three credits.
